

YILFERT ROSIER -

1. It is rich in macro and micro nutritional elements and produced using special raw materials.
2. It is recommended to apply it in the first period of the plants, at the beginning of vegetation and before flowering.
3. Additionally, the plant has an effect on fruit quality when used in the future.
4. When used in recommended doses, it has an accelerating effect on root development and flowering.
5. It can be used in all kinds of soil conditions and is completely absorbed by the plant.
6. It can be used safely with drip irrigation, sprinkler or foliar irrigation. It is completely soluble in water.
7. Thanks to the special raw materials used in production, it is in a form that can be absorbed by plants even in cold soil conditions with its low pH and low EC value.
8. It has homogeneous particle size.
9. All microelements in it are chelated and produced according to European Union norms.
